

# Arc

The Arc is a modular 12 volt heated towel rail functionally similar to the Bow rail.

Like the Bow rail it is available in a single width of 700mm.

The Arc towel rail will compliment many of the items in a contemporary bathroom design, both angular and curved.

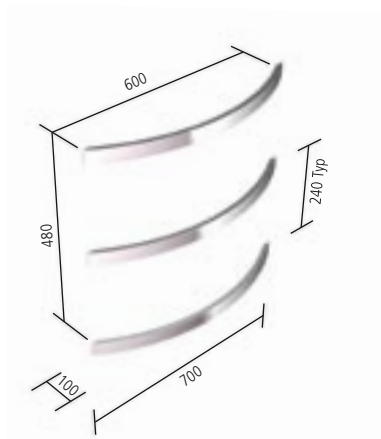

A modular towel rail that can be arranged to suit the clients requirements, vertically horizontally or somewhere in between.

## ARC

The most popular installed multiples of Arc rail are 3 or 4 rails together, but up to 6 rails can operate from a single installation kit.

As with the Bow Rail, Arc rails do not have any visible wiring. They require some pre-wiring within the wall cavity to achieve this result.

*DCS heated towel rails heat up faster than liquid filled rails because of their lighter weight / reduced thermal mass. Typically 15 mins.*
